## Office Action Summary

Application No.

09/726,423

Applicant(s)

SHIBATA, KOICHI

Examiner

Taghi T. Arani

Art Unit

2131

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 04 January 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-21 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-21 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: \_\_\_\_\_

### **DETAILED ACTION**

Claims 1-21 are pending for examination.

#### **Response to Amendment**

Applicant's arguments filed 01/04/2005 regarding the rejection of the claims 1-21 under 35 U.S.C. 102 () have been fully considered but they are not persuasive.

As per Applicant's arguments relating to the rejection of claim 1, Applicant argues (page 1-2 of the response) that the output means of the Nezu patent (US 5,638,511) does not receive both print job and a password corresponding to the print job, as recited in the claim and that in the system of Nezu patent, the output means generates a collation key and outputs it to the client who sent the print job. Applicant further argues that in the system of Nezu patent, the collation key is transmitted from the print server to the client PC, and is written to a removable storage medium which the user carries to the print server and loads it onto the drive at the print server. The Examiner agrees that the collation key is generated by the output means and is outputted to the client who sent the print job. However, generating the key by the output means or the client who sent the print job is not an issue. Claim 1, recites "a receiving unit receiving a print job data and a password corresponding to the print job data". Nezu patent teaches a receiving unit (output means) receiving a print job data and a password (collation key) corresponding to the print job data". Receiving a password along with the print job data where the password is generated by the client who sent the print job data are not claimed, emphasis added. According to the MPEP 904.01, the Examiner is obligated to give each term in the claims its broadest reasonable interpretation ( In re Morris, 127 F.3d 1048, 44 USPQ2d 1023 (Fed. Cir. 1997) and while the

Art Unit: 2131

Examiner reads the claims in light of specification, the Examiner declines to read the limitations from the specification into the claims.

As per Applicant arguments relating to the “prescribed password” , the Applicant argues that Nezu’s master code is to unlock a locked stacker and that the master key of Nezu does not have any effect upon print job data that is stored on the storage device (page 2 of the Response) in contrast with the claimed invention where a super user can present a prescribed password to enter into a mode of operation in which accumulated print job data can be deleted or sent to the printer (page 4, second paragraph of the Response).

The Examiner responds that in the system of Nezu when the retention time for holding print job as a temporarily held job has exceeded the maximum retention period, the security designated job corresponding to the job being temporarily held is set to either a mode of being deleted from the internal spool or a mode of being treated and output as a print job for an ordinary output after the holding of the output process of the print job has been canceled, col. 6, lines 25-33, see also col. 30, lines 13-20, where the operator selects the method of handling the queued job print after the expiration of the retention period. The operator determines whether the print job must be deleted or released from the queue after the retention period.

### ***Claim Rejections - 35 USC § 102***

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Nezu, U.S.

Patent 5,638,511, issued June 1997 .

**As per claims 1, 8 and 15**, Nezu teaches an apparatus/method and computer program product for printing an image, comprising :

Art Unit: 2131

a receiving unit (i.e. output means 2] receiving a print job data and a password [i.e. a collation key] corresponding to the print job data [col. 11, lines 55-67];

a storage device storing the print job data and the password received by said receiving unit in correspondence with each other [Fig. 3 (collation key storage means 7 and print job storage means 6 ), col. 12, lines 29-34] and ;

a password taking unit taking a password [col. 12, lines 37, i.e. a control means 9 retrieving the collation key stored in the collation key storage means 7] ; and

a control [ Fig. 3, control means 9] permitting, when the password taken by said password taking unit matches the password stored in said storage device in correspondence with the print job data, print output of the print job data stored in said storage device in correspondence with said password [col. 12, lines 36-43 ];

wherein, said controller permits, when the password taken by said password taking unit is a prescribed password [col. 5, lines 31-37, i.e. a master code of a person who manages a print server stored in a the storage medium , col. 6, lines 25-33, col. 30, lines 13-20 ] different from the password stored in said storage device (i.e. a collation key corresponding to a print job]in correspondence with the print job data, a prescribed operation [unlocking an electronic lock stacker) on the print job data stored in said storage device.

**As per claims 2,9 and 16,** Nezu teaches the apparatus/method and computer program product for printing an image according to claims 1, 8 and 15 respectively, wherein said prescribed operation includes cancellation of the print job data stored in said storage device [col. 6, lines 24-033, col. 7, lines 36-43].

**As per claims 3, 10 and 17,** Nezu teaches the apparatus/method and computer program products for printing an image according to claims 1,8 and 15 respectively, wherein said prescribed operation includes print output of the print job data stored in said storage device[col. 6, lines 31-33].

**As per claims 4, 11 and 18,** Nezu teaches the apparatus for printing an image according to claims 1, 8 and 15 respectively, wherein said controller permits said prescribed operation for each print job data stored in said storage device [col. 17, lines 56-65].

**As per claims 5, 12 and 19,** Nezu teaches the apparatus/method and computer program product for printing an image according to claim 1,8 and 15 respectively, wherein said password taking unit takes a password by receiving the password transmitted from an external device [col. 3, lines 11-20, i.e. a storage medium storing a collation key].

**As per claim 6,13 and 20,** Nezu teaches the apparatus/method and computer program product for printing an image according to claims 1, 8 and 15 respectively, further comprising:

an information taking unit taking information related to said prescribed operation [col. 13, lines 40-49 disclosing an external storage medium drive unit and an external storage medium drive control unit, col. 14, line 9 through col. 15, line 5, disclosing the data structure including information related to prescribed operation stored in the external storage medium]; wherein

said controller determines contents of said prescribed operation in accordance with the information taken by said information taking unit [col. 31, lines 57 through col. 32, line 14].

**As per claims 7, 14 and 21,** Nezu teaches the apparatus for printing an image according to claims 6, 13 and 20 respectively, wherein said password taking unit takes a password by

Art Unit: 2131

receiving the password transmitted from an external device [col. 3, lines 40-64, i.e. collation key stored in an external storage medium]; and

said information taking unit, takes information by receiving the information related to said prescribed operation transmitted from said external device[col. 14, line 1 (external storage medium) through col. 15, line 46].

### **Action is Final**

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

### **Conclusion**

Prior arts made of record, not relied upon:

US patent 6,667,810 is directed to a transmission job or a printing job is stored in conjunction with a corresponding execution time in the job storage unit, so that a job can be selected from the job list and the execution time for the selected job can be changed. Further, the

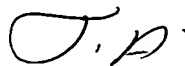

Art Unit: 2131

jobs stored in the print queue are displayed as a list, and a selected job is moved from the print queue to the job storage unit, so that the printing of the job in the print queue can be performed.

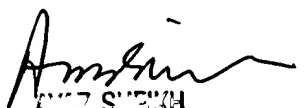

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Taghi T. Arani whose telephone number is (571) 272-3787. The examiner can normally be reached on 8:00-5:30 Mon-Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ayaz Sheikh can be reached on (571) 272-3795. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
